ON   BATT.

Battery

- 🟢 100%
- 🟠 50 %.
- 🔴 MUST BE CHARGED

Lift up

Lift down

Reset

If the RESET button flashes: Press RESET down for 5 seconds, and the lift works again.

Emergency stop

After pressing the red **STOP** button, **Reset** must be pressed down for 5 seconds, in order to re-activate the handcontrol.
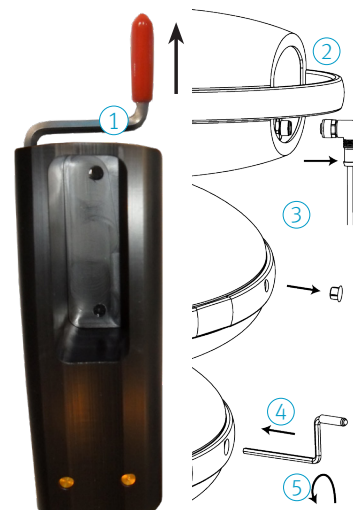

ON   BATT.

R   5 sec.

STOP

EMERGENCY LOWERING

Use if **Lift up** / **Lift down** isn't working; Press down the **parachute button** during lowering, which will start after 5 seconds.
You will hear a constant "beep" when pressing down the parachute button.

If the electrical powered emergency lowering is not working, use the manual emergency lowering:

1. Take the key from the top of the charger.
2. Remove the hand control.
3. Remove the plug on the side of the Luna.
4. Put the key into the Luna.
5. Turn the key counter clockwise to lower the user.

The hand control must always be connected in order for the lift to function.
